Pain Management Clinic Licensure	3
High Risk Controlled Substance Providers	6
Opioid Education Symposia	7
Conclusion	۶

## **Executive Summary**

#### **Background**

In recent years, the number of deaths in Tennessee caused by drug overdose has been higher than the number of deaths caused by motor vehicle accidents. In fact, in 2018, 1,818 people died of a drug overdose in Tennessee, compared to 1,776 in 2017. According to the Centers for Disease Control and Prevention's National Center for Health Statistics the average life expectancy in the U.S. has been on decline for three consecutive years; one of the factors that contributes to this decline is a rise in drug overdoses.

In 2012, the legislature enacted the Prescription Safety Act. One requirement of the Act is that, effective April 1, 2013, practitioners who prescribe certain controlled substances must query the Controlled Substance Monitoring Database (CSMD) prior to issuing a new prescription to a patient and at least annually thereafter. *Tenn. Code Ann.* § 53-10-310(e)(1). The purpose of the requirement is to allow practitioners to identify patients who may have a substance abuse problem and/or who may be doctor shopping (i.e., going to different doctors for treatment and obtaining prescriptions from each one). Since the passage of the Prescription Safety Act of 2012, utilization of the database has significantly increased and the prescription of opioids and benzodiazepines has decreased over that same time period. In 2016, an updated Prescription Safety Act passed which, among other changes, added a requirement for the dispensers check the database the first time a patient was dispensed a substance at that practice site and again annually. This assists pharmacists in their treatment of patients through acting as a check in the event a prescriber is unaware of a problem.

In July 2018, the General Assembly enacted Public Chapter 1039 which placed reasonable limits on the amount and duration of opioids used for acute pain. It limits opioid prescriptions to up to a three day supply with a total of 180 MME (morphine milligram equivalents). Clinical judgement and the patient-prescriber relationship were preserved by providing a number of exceptions under certain circumstances. Some of the exemptions include patients seeing a pain management specialist, patients receiving active cancer treatment, patients who are undergoing a palliative care treatment, patients receiving hospice care, patients with a diagnosis of sickle cell disease, and patients receiving opioids in a licensed facility.

#### **Pain Management Clinic Licensure**

Prior to the Prescription Safety Act of 2012, the General Assembly passed legislation in 2011 regulating pain clinics and requiring that all pain management clinics register with the state. *Tenn. Code Ann.* § 63-1-301 *et seq.* This legislation created a certification process for pain management clinics and required that each clinic's owner register with the state to receive a certificate. Each clinic was required to have a medical director who met certain educational and training requirements. Effective July 1, 2016, medical directors of pain management clinics were required by Public Chapter 475 of the 109<sup>th</sup> General Assembly to meet the definition of a pain management specialist. In addition, all advanced practice registered nurses and physician assistants working in pain clinics must be supervised by pain management specialists.

Beginning July 1, 2017, all pain management clinics were required to become licensed *Tenn. Code Ann.* 63-1-301. All active pain management clinics have been issued a license; there are not any active pain management clinics operating on a certificate. The licensure requirements are more stringent than those of registration for a certificate, and new rules have been promulgated by the Department to govern the process of regulating the licensed clinics.

The Pain Management Clinic Act requires the medical director be on-site at the clinic at least 20% of the clinic's weekly operating hours, and prohibited the medical director from serving in that capacity at more than four (4) pain clinics, beginning July 1, 2017, the medical director must be the license-holder. While many medical directors were owner/certificate-holders, many certified clinics were owned by an advanced practice registered nurse or a physician assistant. Requiring the medical director to be the individual who applies for and is responsible for the license, gives medical directors both more power and control over what happens under their watch at a clinic, as well as more responsibility. Additionally the licensure laws require the Department to inspect every pain management clinic before licensure. The Department may deny licensure, or discipline an existing license, if anyone working in the clinic has been convicted for an offense involving the sale, diversion, or dispensing of controlled substances, has been disciplined for conduct that was the result of inappropriate prescribing, dispensing, or administering controlled substances, or has had their license restricted, or if an owner of the clinic has pleaded to or been convicted of a felony. T.C.A. § 63-1-316.

Furthermore, though licensure inspections are now required, random clinic inspections had not been required by law prior to July 1, 2017; however, random inspections have been undertaken by the department as a best practice. Prior to July 1, 2017, the department randomly inspected one third of certified pain clinics each year. Subsequent to July 2017, when the law was amended to require clinics to be licensed, and through the calendar year 2019, unannounced inspections have occurred pursuant to a licensure application instead of as previously conducted.

Following passage of these laws, over 300 pain management clinics were registered in Tennessee, equating to approximately one clinic per 21,000 Tennesseans. Following changes to the pain clinic laws in 2015 and 2016, the number of registered pain management clinics was reduced to 126 clinics by December of 2019.

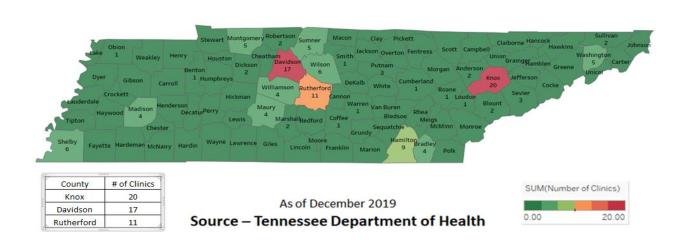

During the 2019 calendar year:

- Sixty two (62) licensure inspections were conducted.
- Eight (8) biennial licensure inspections were conducted.
- Zero (0) applications for licensure were denied.
- Through the Office of General Counsel three (3) pain clinics were granted conditional licenses and one (1) pain clinic was ordered to pay civil penalties.
- Zero (0) clinic license was revoked or surrendered.

#### **Pain Clinic License Renewal**

Pain management clinic licenses are active for two (2) years. The fall of 2019 was the beginning of the renewal cycle for pain management clinic. There were a total of eight (8) pain clinic licenses to expire in 2019; three (3) of those clinics have closed, one (1) has relocated, three (3) have been approved and one renewal license application remains in a pending status.

#### **Licensed Pain Management Clinic in Tennessee**

### **Tennessee Pain Management Clinic Rules and Guidelines**

In order to promulgate rules governing the new licensure process, the Department formed a task force of members of the Board of Medical Examiners, the Board of Osteopathic Examination, the Physician Assistant Committee, and the Board of Nursing. In December of 2016, the task force met to review a proposed draft of the rules, and heard and responded to public comment. After incorporating much of the feedback from the task force and the public, the Department promulgated emergency rules in May of 2017, and held a rulemaking hearing in July of 2017 to hear public comment on those rules becoming permanent. After a lengthy public hearing and passage of a period for written comment, the updated, permanent rules became effective in November of 2017.

The pain clinic rules, the FAQ information, and pain clinic guidelines posted to the Department's Pain Management Clinic website give practitioners information they need to understand and comply with the new licensure process.

FAQ Information: https://www.tn.gov/content/dam/tn/health/healthprofboards/pain-managementclinic/Pain Clinic FAQ.pdf

#### **Practice Guidelines for Treatment of Chronic Pain**

In response to the legislation passed by the General Assembly, in 2012 the Department created the position of medical director of special projects, whose duties include facilitating the creation and review of guidelines for prescribing opioids, benzodiazepines, barbiturates, and carisoprodol as required by T.C.A. § 63-1-401 et seq. The medical director of special projects has traveled throughout the state discussing pain management with practitioners and getting feedback for consideration in developing courses for the upcoming year Opioid symposia.

In 2013 and as part of the Addison Sharp Prescription Regulatory Act, Tenn. Code Ann. 63-1-401 et seq., the General Assembly directed the Department to create treatment guidelines for prescribing of opioids, benzodiazepines and other drugs to be used by Tennessee practitioners in caring for patients. The Chronic Pain Guidelines was developed to provide guidance in treating chronic pain by practitioners who are not pain specialist or do not practice within a pain management clinic. The method used to formulate these guidelines included a review of national expert panel recommendations and state practice guidelines, multiple listening sessions with clinicians in Tennessee, oversight by a chronic pain guidelines committee and recommendations from an advisory committee with strong representation by clinicians with specialty training in a variety of fields including pain medicine. The guidelines have been updated each year with additional input from the chronic pain guidelines committee and have been adopted by the various prescribing health related boards.

The 3<sup>rd</sup> edition of the Chronic Pain Guidelines was completed by the Chronic Pain Guidelines Expert Panel in 2018 and posted in January 2019. The guidelines and those who gave of their time and expertise to make the guidelines a reality can be found at:

#### **High Risk Controlled Substance Providers**

Public Chapter 483 of the 110<sup>th</sup> Tennessee General Assembly (codified at *Tenn. Code Ann. §68-1-128*) required the Department to identify and notify high-risk prescribers based on clinical outcomes, including patient overdoses. In July of 2019, letters were sent to the top ten (10) providers identified by the Department as high-risk based on 2017 data to inform them to take the following remedial actions:

- Required to complete continuing education designed about the risks, complications, and consequences of opioid addiction.
- Make educational material available in waiting room and clinic areas accessible to patients that warn patients of the risks, complications, and consequences of opioid addiction.
- Obtain written consent on a form from every patient who will receive opioid therapy for more than three (3) weeks with daily dosages of sixty (60) morphine milligram equivalents (MME) or higher that explains the risks of, complications of, medical and physical alternatives to, and consequences of opioid therapy and addiction.

The high-risk prescribers are required to comply with these requirements for a period of one (1) year.

In 2015, the Department added an advanced practice registered nurse to the medical director of special projects team who has joined him in his work to review and educate around the state. As required by *Tenn. Code Ann.* § 68-1-128, the medical director's team, along with the Office of General Counsel, has reviewed data on the top 50 prescribing practitioners in Tennessee and has used that data to assist in identifying practitioners of concern as well as educating practitioners. The total morphine equivalence prescribed in aggregate by the Top 50 prescribers has decreased each year since 2013. After five years of experience with the top 50 prescriber analysis, the MMEs prescribed by this group have declined 49% since the first analysis perform on data from 04/01/2012 – 03/31/2013 as noted in the line graph below.

Despite the increasing death rate, analysis of the Controlled Substance Monitoring Database shows that progress has been made in many areas. The number of opioid prescriptions has declined between 2013 and 2018. From 2013 through 2015, opioid prescriptions numbered around 2 million per quarter (representing a crude rate of about 300 – 325 prescriptions per 1000 residents). After Q3, 2015, opioid prescriptions for pain have declined in each quarter, down to just over 1.3 million (199 per 1,000). Every year, about 70% of patients who fill prescriptions of opioids for pain had active prescriptions for only a month or less during the entire year. In 2018, as in many previous years, the top three most prescribed controlled substances in Tennessee were hydrocodone products (e.g., Lortab, Lorcet, Vicodin), alprazolam (brand name Xanax), and oxycodone products (e.g., OxyContin, Roxicodone). *Prescription Drug Overdose Program: 2019 Report*.

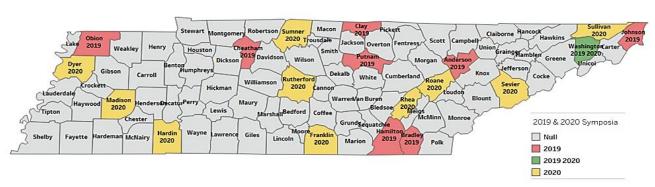

There has been an 85% decrease in doctor/pharmacy shopping (defined for these purposes as visiting five or more prescribers or dispensers in a three-month period) from 2013 through 2018. The amount of MME's (morphine milligram equivalents) dispensed per capita from 2013 to 2018 decreased for every county across the state, with an approximate 43% decrease statewide in opioid MME's dispensed from 2012 to 2018.

#### **Opioid Educational Symposia**

The Office of Special Projects coordinates and hosts a series of symposia and speaking engagements across the State of Tennessee with health care professionals, regulators and the communities to discuss updates in the chronic pain guidelines, new issues, data and laws in the opioid epidemic.

The audiences consisted of consumers, health care providers, law enforcement officers, drug enforcement officials, and attorneys. Programming included live audiences, live streaming, and archived efforts to reach all health care providers. The streaming and archived programs reached additional health care providers. Each of these educational opportunities allowed health care providers to earn Continuing Medical Education (CME) or other Continuing Education (CE) credits.

In 2019, the Office of Special Projects conducted twenty-four (24) opioid related speaking engagements across the State of Tennessee, eight (8) of which were Opioid Use and Prescribing educational symposia opportunities. There were approximately 3,320 attendees throughout the State of Tennessee.

2019 & 2020 Opioid Educational Symposia

#### **Conclusion**

The Department is working hard to protect the people of Tennessee from the effects of prescription drug abuse. Our goal for the citizens of the State of Tennessee is to provide access to quality pain management. In collaboration with health care experts, dispensers and prescribers, we attempted to provide stricter regulations for practitioners to reduce the number of patients being adversely affected by inappropriate prescribing and dispensing.
